OUR PROCESS

1. We start by our technicians introducing themselves to you. Then we find the location of the dryer and put drop cloths down surrounding the dryer.
2. We then pull the dryer away from the wall to expose the flexible dryer duct and remove it to be cleaned.
3. We will hook up a HEPA filtered vacuum at the dryer duct inlet in the home and then go to the exterior of the home and use a specially designed cable and brush to clean the walls of the duct and push the lint towards the HEPA vacuum.
4. We will then clean out the lint trap in the dryer.

- 2,900 dryer fires are reported each year and cause an estimated 5 deaths, 100 injuries, and \$35 million in property loss.
- Dryer fires are the number one leading cause for home fires.
- More dryer fires occur in the fall and winter months, peaking in January.

AEROSEAL®
Duct Sealing From The Inside

To clean your duct work and not seal it in some cases would be like washing your car and driving it through a mud puddle.

Here are some of the benefits of sealing your duct work.

HOME COMFORT

The #1 reason home owners want to seal their duct work is because they experience hot and cold rooms or high temp differences between upstairs vs downstairs living areas.

INDOOR AIR QUALITY & HOME SAFETY

Many home owners notice dust collection around registers and higher than average dust collecting on surfaces throughout their homes. Leaky ducts pull dust, mold, and other pollutants into your home, presenting indoor air quality issues and creating and/or aggravating allergy problems.

ENERGY SAVINGS & UTILITY BILLS

Nearly 50% of the average home's and commercial building energy bill is spent on heating, air conditioning and ventilation. Duct leakage in residential homes costs consumers \$25 billion each year and costs much more to the commercial building operators / owners.

Wouldn't you fix a leaking water pipe?

EXPERIENCE MATTERS

You can trust Total Indoor Environmental Solutions 360°, LLC to take care of the indoor air quality in your home. We have over a decade of experience in the HVAC industry and we look at the AC system from not only a mechanical aspect but from indoor air quality aspect as well. When looking at the HVAC system from both of these aspects we are able to determine the true source of the issue instead of just treating the symptom.

We provide these services with a dedication to the highest quality of customer satisfaction delivered with a sense of warmth, friendliness, pride and company spirit.

Ask us how you can qualify for a 10 year guarantee on your duct cleaning.

SEE WHAT OUR CLIENTS HAVE TO SAY ABOUT US

The company was professional, informational, and did a great job!! This was a condo unit that was compromised by mold due to a roof leak this past summer. After clean up the air still had an odor and suspected it was in the air duct system. After cleaning and treating the air ducts the smell is gone. Hopefully our problem is resolved but will only know over time after the good smell of the solution they used in the process dissipates. We would definitely hire this company again. - C.B.

We contracted T.I.E.S. 360 to clean our vent system and remove some mold. Anthony did a great job of educating us regarding air quality and how the crew would attack our

problem. And they did exactly that ! It was evident from the moment they entered our home that they take pride in their work and really care about their client. We highly recommend this company. - J.K.

5 SCARY FACTS ABOUT INDOOR AIR QUALITY

- 1. IAQ is a TOP 5 Health Risk** - The United States EPA ranks indoor air quality as a top five environmental risk to public health. Meanwhile our homes are getting tighter to meet new Energy Codes.
- 2. Air Fresheners are POISON** - The NRDC determined most Air Fresheners contain phthalates, noxious chemicals known to disrupt hormone function in babies and children.
- 3. Poor Quality Air Exacerbates Asthma** - Since the early 1980s, the occurrence of asthma has been on the rise for everyone — all races, classes, and ages. Simply put, asthma is a silent epidemic that has a disastrous effect on quality of life.
- 4. The Indoor Air Quality in Schools is Among the Worst** - Schools accommodate up to 4x more occupants, aka students, than a standard office building with the same amount of floor space. What makes this alarming is that children breathe more air relative to their body weight than adults. Many germs, allergens and yuck can spread quickly.
- 5. The Elderly & The Young Suffer Most** - Many elderly & young spend the majority of their day inside, whether in their own homes or in care centers. Some estimates suggest that the average time spent indoors is 19-20 hours a day. According to the John Hopkins report mold is the leading cause of asthma in infants.

Here are some suggestions for Improving Your Indoor Air Quality

Improve ventilation — don't let the concentration of pollutants build up. Air out your home more.

Clean the air using top quality air filters — a HEPA filter or Guardian Air REME are excellent options.

Dust with a damp cloth to remove particulate matter — don't just spread it around, clean it up.

Get your duct work checked every 2 years to determine if it needs to be cleaned.

Only hire NADCA Certified & Licensed contractors to clean and restore your HVAC system.

Why replace your HVAC system if all you need to do is restore it?
